

Instruction Manual

Enriqueta Hueso Martinez Website
and Gallery O+O

Enriqueta Hueso Martinez

1. Website Structure

The website has two integrated parts:

- Main site (Enriqueta Hueso): artwork, biography, career, press, contact, 16 visual themes, 8 languages.
- Gallery O+O: historical archive with exhibitions, artists, news, fairs, articles, courses and contact.

Main files

index.html	- Main page
css/styles.css	- Main styles
css/themes.css	- 16 artistic themes
js/main.js	- Functionality
js/translations.js	- Translations (8 languages)
gallery-data.json	- Gallery data
build_gallery.py	- Build tool
img/cuadros/	- Category folders
galeria/	- Gallery O+O subsite

2. Artwork Gallery Management

Adding a new category

1. Create a folder in img/cuadros/ (e.g., img/cuadros/Watercolors/)
2. Place images inside (JPG, JPEG, PNG, BMP, TIFF, GIF, WEBP)
3. Run: `python3 build_gallery.py`
4. Refresh the browser.

The tool auto-detects new images and renames them to the standard pattern (Category_0001.jpeg). Existing images are NEVER touched.

Adding images to an existing category

1. Copy new images to the corresponding folder
2. Run: `python3 build_gallery.py`

New images are numbered starting from the last existing number.

Full command

```
python3 build_gallery.py --all
```

Runs everything: scan, auto-rename, JSON generation, and thumbnails.

NOTE: The tool can be run from any folder:

- enriquetahueso/
- enriquetahueso/img/
- enriquetahueso/img/cuadros/

It auto-detects the project root.

Sale status

In gallery-data.json, each image has a "status" field:

- "sale" - Available for purchase
- "sold" - Sold
- "notforsale" - Not available

3. Languages and Themes

8 languages: Spanish, English, German, French, Italian, Chinese, Japanese, Farsi.

16 artistic themes: Classic Gold, Nocturne, Oriental Ink, Earth & Ochre, Vivid Abstract, Black & White, Historic, Valencia, Vintage, Retro, Swing Jazz, Postmodernist, Picasso, Da Vinci, The Scream, High Contrast.

4. Contact Form

The form tries to open the email client. If it fails, it shows webmail options (Gmail, Outlook, Yahoo). The subject auto-fills based on the selected reason.

5. Registering a Domain

A domain is your web address (e.g., enriquetahueso.com). To register:

1. Go to a domain registrar. Recommended:
 - Namecheap (namecheap.com) - from \$8-10/year
 - Porkbun (porkbun.com) - from \$7-9/year
 - Google Domains (domains.google) - from \$12/year
2. Search for your desired domain (e.g., enriquetahueso.com)
3. Add to cart and complete the purchase
4. Create an account with email and password
5. Complete payment (credit card or PayPal)

TIP: Also register .es and .art variants if available.

6. Getting Hosting

For a static site (HTML/CSS/JS) the best free or cheap options:

Option A: Netlify (FREE - Recommended)

1. Go to netlify.com and create a free account
2. Go to app.netlify.com/drop
3. Drag your entire project folder onto the page
4. Your site will be online in seconds at name.netlify.app
5. To update: drag the folder again

Option B: GitHub Pages (FREE)

1. Create account at github.com
2. Create new repository (e.g., my-website)
3. Upload all files to the repository
4. Go to Settings > Pages > Source: main branch
5. Site will be at username.github.io/my-website

Option C: Traditional hosting (from \$2-5/month)

- Hostinger (hostinger.com) - from \$2/month
- SiteGround (siteground.com) - from \$3/month
- Ionos (ionos.com) - from \$3/month

7. Connecting Domain to Hosting

For Netlify:

1. In Netlify: Site Settings > Domain management > Add domain
2. Type your purchased domain (e.g., enriquetahueso.com)
3. Netlify will show DNS servers (e.g., dns1.p01.nsone.net)
4. In your domain registrar (Namecheap, etc):
 - Go to domain settings
 - Find "Nameservers" or "DNS"
 - Change to "Custom DNS"
 - Paste the nameservers from Netlify
5. Wait 24-48 hours for DNS propagation
6. In Netlify: enable HTTPS (automatic free SSL)

For GitHub Pages:

1. In GitHub: Settings > Pages > Custom domain > type your domain
2. In your domain registrar, add DNS records:

```
Type A:      185.199.108.153
Type A:      185.199.109.153
Type A:      185.199.110.153
Type A:      185.199.111.153
Type CNAME:  www -> username.github.io
```

3. Wait 24-48 hours
4. Enable "Enforce HTTPS" in GitHub Pages

8. Uploading Content

For Netlify:

Simply drag the complete folder to app.netlify.com/drop whenever there are changes.

For traditional hosting (FTP):

1. Download FileZilla (filezilla-project.org) - free FTP client
2. Enter FTP details provided by your hosting:
 - Server: [ftp.yourdomain.com](ftp://ftp.yourdomain.com)
 - Username and password (from hosting panel)
 - Port: 21
3. Navigate to `public_html/` or `www/` folder on the server
4. Upload ALL project files

IMPORTANT: Upload ALL files:

- *index.html, css/, js/, img/, gallery-data.json*
- *galeria/ (with posts/, images/, style.css, site.js, translations.js)*
